

Wrap up and Conclusions

- **No major issues**
- **Short term objectives:**
 - Finalize the WP2 technical developments: validation and selection
 - Production of the Extension for SL ECV version V1.1 [2014]
 - Assessment of SL ECV version V1.1 (UoH, ECMWF, NERSC, LEGOS)
- **New altimeter missions** expected in SL_cci V2.0 :
 - ⇒ **SARAL/Altika** : L2P altimeter database is available
 - ⇒ **Cryosat 2** : which L2P dataset ? Action: Decision after the CS-2 QWG (March 2015): between ESA GOP and CPP CNES products.

Discussion:

- **Inter comparison exercise:** discussion
- **Martin S.: How to deal with the known errors in the products?**
- **Next meetings:**
 - PM#4: 5th May
 - CMUG: 26-28th May, SMHI (LEGOS, CLS, ECMWF, UoH ?)
 - PM#5 7th July
 - Collocation: 29 Sep.- 1st Oct, ESRIN (LEGOS, CLS, one from CRG, CGI)
 - PM#6 + Selection Meeting: Toulouse / ESRIN End of November
- **Minutes of the meeting** will be written and will circulate (CGI/CLS)

Discussion:

- **Organize a POD discussion:** details of the orbit calculation and the associated uncertainties on the long-term stability (Rudenko et al. 2014, Couhert et al., 2014)
 - ⇒ Could be organized at the beginning of the Selection meeting
- **CCN** to be written and proposed to ESA before summer 2015
- **ISSI Bern international teams:** Sea level in Arctic (Pierre Thibaut) and “Water vapour issues for climate applications (Bruno Picard) and “Climate models and satellite altimetry” (Benoit Meyssignac).

ESA Sea Level Climate Change Initiative

Wrap up and conclusions

- Suggestion to provide an attractive title for the next SL_cci abstracts/talks :

« SL_cci ECV products: an unique accurate data time series to describe the sea level evolution at climate scales »

???

No	Description
9	ESA ask for adding the name and origin of the users on the website: ask for them what they've done with the product (short description, figure, publication...)
16	Determine a formal protocol for the exercise of "international comparison" of different dataset (sea level and its contributions): RRDP-like
18	To define the information to be linked with the DOI associated with the SLCCI dataset
19	More info should be included to the website:papers in ESA symposia, workshops, collocations... Lectures and conferences by science leader and other team members
35	Send to ESA the 'user feedback request' email, and send out a more personable email to each of the users, from Anny or Gilles, with Jerome in cc.
41	GMSL CCI+AVISO: figure to be adapted
51	CGI to systematically add on the website communications from partners related to the project: add all posters and oral presentations recently given at external conferences (see slide #13 and Nov. MPR) and add a web news indicating that a paper presenting the project has been published (Ablain et al., Ocean Science, 2014)
52	CGI to regularly update/refresh "upcoming events" section of the website with the dates of internal meetings of the project (collocation, CMUG,...) and external conferences (AGU, EGU, S3 workshop...)
